

TUCKER WIRELINE AND READ ENTER CANADIAN SEISMIC MARKET

Tucker Wireline Services (TWS) has entered into an operational agreement with READ Well Services for exclusive use of their Seismic and MicroSeismic Services in the North American Market. This will allow TWS to bring READ's international experience in the Seismic business to North American clients. Services will include Checkshot, VSP, Offset VSP, MicroSeismic, Long Term Monitoring, Cross Well Tomography and full processing capability.

Also, the need for quality monitoring of multi-stage fracturing operations continues to grow, and jointly, TWS and READ expect to be leaders in this area.

TWS and READ expect to be fully operational with our Seismic and MicroSeismic systems by mid-October in the Canadian Market.

Tucker Wireline Services Canada is a division of Tucker Energy Services, a private, family-owned service company founded in 1935; Tucker Wireline Services is dedicated to supplying quality services, logging data and innovative solutions to the oil and gas industry. Tucker Energy Services operates in nine countries worldwide: Canada, the U.S., Australia, Trinidad, Suriname, Belize, Colombia, Venezuela and Brazil.

The company began operations in Canada in 1991 and has operating bases in Leduc, Grande Prairie and Medicine Hat as well as Calgary headquarters.

Tucker Wireline Services builds on a longstanding tradition of quality, service and cost-effective solutions in order to optimize production and help customers make more money.

READ Well Services is a Norwegian based company with over 20 years experience providing seismic services offshore and on land internationally. Read Well Services is a world leader in seismic acquisition and processing with a strong commitment to research and development. They have developed their own processing software.

A world leader in seismic services, Read has set many milestones. Over 1800 VSP's have been processed and many 3D surveys.
