

ORION™ DATA ACQUISITION SYSTEM FOR COILED TUBING OPERATIONS

The Orion DAS for CT operations is a combination of hardware and software that measures, displays and records parameters during coiled tubing operations. It works seamlessly with the Cerberus software package to monitor CT working life, tubing limits and tubing forces in real-time.

FEATURES

- Store an accurate record of all the coiled tubing events.
- Automatically record depth , speed, surface weight, pump rates and volumes and wellhead and circulating pressure information for use in Cerberus.
- Perform real-time monitoring at the wellsite. If something unexpected happens, use the inputs in Cerberus to model the situation and pick the best possible course of action.
- Print customizable reports accurately detailing the events of the job.
- Advanced monitor option runs in the background and alerts the operator when a pre-defined condition is detected
